How Will AI Affect Jobs - How many jobs will AI replace by 2030

Artificial intelligence (AI) could replace the equivalent of 300 million full-time jobs, a report by investment bank Goldman Sachs says. It could replace a quarter of work tasks in the US and Europe but may also mean new jobs and a productivity boom. And it could eventually increase the total annual value of goods and services produced globally by 7%. The report also predicts two-thirds of jobs in the U.S. and Europe "are exposed to some degree of AI automation," and around a quarter of all jobs could be performed by AI entirely.

Researchers from the University of Pennsylvania and OpenAI found some educated white-collar workers earning up to \$80,000 a year are the most likely to be affected by workforce automation.

Forbes also says that According to an MIT and Boston University report, AI will replace as many as two million manufacturing workers by 2025.

A study by the McKinsey Global Institute reports that by 2030, at least 14% of employees globally could need to change their careers due to digitization, robotics, and Al advancements

Describe a photo

ChatGPT

This photograph captures a moment of urban life, likely in a European city, where the architecture and the activities suggest a blend of tradition and daily hustle. The scene takes place in an arched gallery paving the way to a deeper street perspective.

The focus of the image is a man, possibly a waiter, stepping out from what appears to be a restaurant or café. The establishment has a classic aesthetic, with a deep red façade and door frames, and large windows that allow a peek inside to the white-clad chefs or kitchen staff at work. The word "HEGAR" is visible above the door, suggesting either the name of the establishment or an indication of its heritage.

The waiter is in motion, dressed in a white shirt, a dark vest, black trousers, and a bow tie, carrying a tray with colorful items that look like drinks or possibly desserts. He is wearing a face mask, indicating that the photo was taken during a time when health precautions were in place, possibly during or after the COVID-19 pandemic.

Behind him, the street recedes into the distance, lined with similar architectural styles, shops, and people in various states of motion. One person in particular, in the midground, is dressed in business attire carrying a briefcase, suggesting the photo was taken on a weekday during working hours.

The lighting is soft, indicating either morning or late afternoon, casting gentle shadows and giving the image a warm tone. The composition balances the activity and life of the city with the stillness of the architecture, providing a snapshot of life in a bustling urban
